

REMARKS

The amendments to the specification are based on the published application US 2006/0149054 A1.

The specification has been amended to insert the bridgehead nitrogen atoms in various formulas including formulas I, II, IV, V VII, VIII, III¹ and III².

Claims 1-19 are being examined in this application. Claim 20 has been withdrawn.

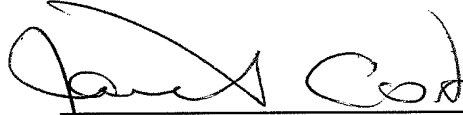

Claim 1 is being amended to correct the structures of formula I by inserting the bridgehead nitrogen atom. Claim 1 is also be amended to replace the phrases “substantially free of impurities” and “high purity” with -- where the purity is greater than 97% --. This is supported on page 21, lines 11-12 and page 22, lines 1-3 of the originally filed specification corresponding to paragraphs [0101] and [0104] of the published specification.

Claims 1 and 18 are being amended to replace “co-solvent” with “anti-solvent”. One skilled in the art would understand that the correction of co-solvent to anti-solvent is not new matter.

Claims 12, 16 and 19 are being amended to overcome the Examiner’s rejections and objections to the claims are moot.

It is applicants’ position that no rejections or objections remain and this application is in condition for allowance. If any issues remain, it is respectfully requested that the Examiner contact the undersigned.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Janet I. Cord", is written over a horizontal line.
